Abstract

Survival of the fittest is acknowledged to be the concept behind the evolution of Life but knowledge of the physical, relativity and bottom-up organisation could improve the structure [as context] and deriving the universe theoretically allows a true science to be developed, built on absolutes, to provide the pathway to a true democracy, using electronics, to solve the problems of time and distance that have forced us into the disastrous representative democracy that we have currently. The Herd-model shows how the various political parties contribute and detract from the ideals that they would have us believe are good for us, that are, in fact, designed to benefit themselves. The Herd-model is a new approach that uses an organisational absolute to show the shocking degree to which we have been mislead and provides a better allocation for our votes.

Keywords: politics; science of governance; governance; true democracy; organisation; relativity

Disclaimer: *the subject matter of this paper is new but must be classed as an opinion-piece and cannot be classified as scientific [not being based on past peer acceptance] and is theoretical [not based on the scientific method [that is measurement]] and it's use may conflict with peer acceptance. Secondly, the paper is, in truth, scientific because (1) it is based on absolutes [as it must for comparisons to be made], and (2) on the simplest absolutes [unlike Newtonian physics that is based on the more complicated force equals mass times acceleration]. Thirdly, mistakes [contextual] may occur because I am a generalist, whereas a specialist is a specialist [conceptual] in a subject and would not be expected to make mistakes. Fourthly, social science and social engineering require organisation that is entangled and contextual [not conceptual] and these requirements are the result of relativity and cannot be eliminated.*

Preface

The science of governance is new and is now available based on the simple and similar fractal nature of our universe [1, 2, 3, 4, 5] and observation leads to an understanding of the Australian political parties that are similar to those in other Western so-called democracies [5]. The 'representational democracy' was planned to be a usable form of governance in the pre-electronic era of 200 years ago but has been corrupted over time to include universal suffrage [that disrupted the yes/no mechanism of the vote]. The mechanism of the voting system is the concept and, I believe, that we need the context [whys and wherefores] that run throughout society because our universe can be derived from the general philosophical creation equation *concept plus context is nothing* and specifically *energy plus organisation is nothing*.

The science of governance leads to an appreciation of the context of society in general that is the interplay of the social forces that push societies whichways and, using the organisation of the mind-brain [in a simple and similar fractal [6]] we can examine the context between the myriad concepts within the brain or society. This examination of the contexts brings to light understanding of what goals we should pursue and setting goals is the primary concern of an organisation, such as the absolute that *a strong country consists of one culture, one religion, one goal and make everything within certain marketing areas*.

The dream of a democracy originated in the simple culture of ancient Greece thousands of years ago and our attempt to emulated it 200 years ago has now led to the immanent destruction of Western civilisation by the madcap theorists of communism, socialism etc. that have actually gained traction and emerged as role-models for public servants. Communism, socialism etc. are not realistic because they promote selfishness without considering the well-being of the group or species [as a relativity] and the public service is similar and has become a cancer within out capitalist-socialist society that sickens and kills our production. Socialism has the same objectives as communism with the government [not workers] owning everything and that appeals to the unsuccessful who have no aspirations but to offer themselves for paid work. For example governments, Councils etc. offer permanent employment, no responsibility [just follow the law], get a pension that dies with them [not available to help offspring], petty power [to enforce laws] and subsidised [affordable] housing.

The Catholics have infiltrated the Protestant areas and now the Muslims are flooding into Christian areas aided and abetted by weak governments with their own agenda such as the Albanese government [in Australia] is facing the wrath of the people by ignoring street marches and allowing predominantly 3rd world migrants to enter the country with government help. Such is the anger of people, that an insignificant party [One Nation] has become the most popular party that is building influence and seats through by-elections. There are existential fears for the existing culture from a so-called leader [Albanese] that lies [reneging on the election promises], has little experience other than political backroom manipulation, is not a true socialist [owns houses] and seems to direct government money to enhance his properties etc. 'A leading constitutional expert has labelled an Albanese government decision to award a $6m grant gifted to a golf club in the prime minister's electorate as "grey corruption", and called the scheme under which it was awarded a "farce". Anne Twomey, a University of Sydney professor emerita, submitted the scathing assessment to a Senate inquiry into an opaque $560m invitation-only grants scheme used to fund projects Labor promised at the 2025 election, and which largely went to Labor-held seats.' Clearly, we need a true democracy that corrects these problems and especially the ability to change your vote anytime.

The Perils of Pauline

In Australia, world history is possibly repeating itself, as it always does in our simple, similar fractal universe where a modern Joan of Arc [Pauline Hanson] is battling the corrupted entrenched hierarchy that has evolved over the last 200 years where Prime Minister Albanese is accused of giving money [to a local golf club, above] and roadworks to enhance the value of his houses. Pauline has suffered in isolation for 30 years and was even jailed on an electoral charge [later withdrawn on appeal] by those in power [Howard and Abbott] and yet she has the chance to change the history of the Western democracies with her pugnacious support for the common people against the machinations of the socialists that have gained power with trickery such as promising to wipe off $15 thousand million dollars from student loans [as an election promise], flooding the country with third world immigrants to boost the economy [and Labor voters], reneging on electoral promises on taxation [capital gains tax and negative gearing] etc. Pauline may have been selected by chance or God to possibly emulate Joan of Arc and save democracy from the inept socialists where she could wear the armour of righteousness that is this new theory of governance and social engineering built on formal organisation which could be considered to be a [contextual] form of God. Can Pauline change the governments of the Western world, stop the invasion of the Muslims [that appears to be promoted by the socialists] and restore the sovereignty and culture of the Western world? The basic problem is the governance that gives political parties absolute control for 3 or 4 years and, while it might have been sensible in a slower age, it has to be replaced by a modernised change-your-vote electronic management system and that begets a true democracy.

The Background

The aim of this series of papers is to save the Western democratic nations from the folly of trying to manage a modern society without knowledge of bottom-up formal organisation, relativity or knowledge of the the physical and yet there is a class of people that are prepared to try to do this that are called politicians and can be grouped under a heading that the 'Dunning-Kruger effect is a cognitive bias that describes the systematic tendency of people with low ability in a specific area to give overly positive assessments of their ability' (Wikipedia) as well as social misfits that see a quick route to power and money.

This paper is one of a series that has tried to include the bottom-up organisation [for uniqueness], formal organisation [for accuracy], relativity [for truth] and the physical [for structure] that has defined physics [7], neuroscience [8, 9, 10], social science [11] etc. using a new theory that creates formal organisation to satisfy the universal relativity [Two-ness] that we see around us. These inputs are necessary as the context of a science of governance [5] that updates the quality of the science of physics [that has become a religion based on a 350 year-old Newtonian physics that works but is woefully incomplete theoretically] to a first-class science based on physical and organisational absolutes. The organisation of this science led to examining society [11, 12, 13] that has suffered under the yoke of a governance that had been [possibly in good faith] corrupted by the agents that now see themselves as leaders.

The solution, I believe, is a true democracy that contains the organisation [as above] that works in an easily understandable way by using the simplicity and similarity of the absolute of the herd-system [5, 11] in our fractal universe. A blatant examples is Albanese's 'changing his mind' and introducing the capital gains tax that he promised not to do at the election [and retrospectively making my farm subject to the tax], likewise considering the case study of the treatment of the pensioners and retired at the Batemans Bay Soldiers Club [3], the Premier of NSW [Minns] reneged on his promise [at the election] to investigate gambling. Clearly, this 'changing their mind' presents a relativity [to the electors] that could be called lying to get elected.

There are grave problems facing the Western democracies at the

Copyright © Darryl Penney

moment and the state of mind of our so-called leaders is under question. Consider 'News24 host James Morrow highlighted the wave of alarming reports emerging from the UK amid a rise in asylum seeker arrivals. “It seems like almost every day there is another horror story out of Britain," Mr Morrow said' and this from a country that had an Empire that stretched around the world a hundred year ago. How the mighty have fallen to the extent that they cannot manage their own country! The reason, I suspect, lies in the lack of knowledge of the science of governance which is now being published [1, 2, 3] as a mathematics [4] and as a science [5] and as an absolute that firstly, partakes of the simplicity and similarity of the physical and secondly, can be easily understood.

The Herd-model Absolute

The Herd-model has been cited as a means of bettering the population, controlling the birthrate and improving the home-life of children to improve their personalities etc. [11, 5] and it works well [as an absolute] in simplifying the complexity of modern societies and it shows that certain groups are excluded or eliminated from the herd for the benefit of the herd and we must do the same [to society] through social engineering [11]. The final picture is not the present political parties chasing influence for themselves but a scientifically correct governance that is appropriate to a modern society. Unfortunately the selfish and cheaters are in power and we should fight lawfully with organisation on our side.

This is justifiable because firstly, the Labor party are workers without the ability and goals to be of great use to the community secondly, the daily newspaper reports support the ineptitude of the Albanese government thirdly, the justification involves the orthogonality of male/female outlook and fourthly, the external versus internal family relativity. The latter two parties [Labor and Green] are superfluous as can be seen from the example that Labor are the excluded and cheaters trying to get something [without a return] and the Greens are superfluous because the environment is crucial to life and is well protected by excluding the selfish and cheaters. It cannot be denied that people help the disadvantaged [to a degree of fairness] but Labor's National Disability Insurance Scheme is excessive where paid carers go *individually to Clubs etc. with a particular disabled person multiple nights a week* [3]. Selfishness, like wants, is infinite and should be entrusted to Wagner's law not bureaucrats [5].

The Physical

Consider the physical:

1. We need to change our thinking from concepts [that are only half of the creation equation] so that
2. we can use both the concepts and context
3. of the simple creation equation that produces the simplicity and similarity that is the basis of a fractal but the use of such an equation for building requires
4. orthogonality that concept and context are strictly independent except at the origin where they are
5. entangled as pairs. The universe is a relativity with concept melding into context continually
6. and to view it we must remove the relativity by [mathematical] division] which means that
7. we can view the universe as three absolutes: a. constant speed of energy [light] and organisation [information] b. quantum gravity and c. quantum time [7, 14].
8. Notice that a. means that length, time and matter change relatively in our view [as relative speed increases], b. allows Newton's law of gravity to be derived [attraction only] and c. gives the explanation for cosmic inflation [15].

The effect of the restrictions of the physical underlie social decisions, especially the fractal, and show the need to include the physical bottom-up.

The Herd Model

The simple herd model is an organisation that preferentially improves the species over time:

1) a dominant male that could be considered to represent the best genes for breeding and offers adequate access to food, shelter and protection for females,
2) inferior males are excluded except for selfish cheaters that thwart the system,
3) the dominant male is outward-looking whilst the females are inward looking at breeding.
4) Effectively any [healthy] female is welcome for genetic diversity.

The herd model applied to a modern world:

1. the government has a duty to improve the members' genetic, physical and mental health over time,
2. the traditional family is the mainstay of population growth but is increasingly plagued by domestic violence as the stresses of modern life increase and the mental and physical health of individuals declines from lack of selection.
3. The future of the human race depends [at the moment] on women producing an average of three offspring each and both family and government need to select for improvement.
4. Change is difficult to implement en masse and replacement is easier for the government to offer IVF to young women and pay them a wage for life for having their 3 children [with IVF from successful old men selected by life, personality, looks, statue and genes etc.].
5. The earlier the better for birthing, involving her parents [instead of a husband] is less stressful, more efficient, utilises existing family home and provides income and later marriage with whomever she pleases.
6. The government provides distress housing preferentially for these special children [if necessary] to prevent personality damage from domestic violence etc. [social engineering [11]].
7. The herd model is , through the fractal nature of the physical, able to simplify our concepts of a complicated society so that we can understand

Copyright © Darryl Penney

and appreciate the absolutes.

8. Socialist governments [in particular] have taken over the male's traditional role of protector and provider to the family and have made males increasingly superfluous and this organisation gives the determined males a goal to fight for to keep his genes in the running.

A True Democracy

The requirements of a voter in a true democracy:

1. the voter must be able to vote as they wish
2. be fully informed as to the options by experts on each side
3. be cost-free voting
4. be instantaneous and not subject to time and distance constraints
5. the vote can be changed at any time if the current procedure disappoints
6. the numerical value of the vote is dependent on its relativity to the voter so that pensioners should not vote on pension entitlements, males on female matters and [vice versa] and out of area constraints etc. In other words, a vote has to be relative to firstly, your concern in the debate and secondly, your value to the group or species and should be a summation of relative values such as education, experience, age etc.

A management situation that is on-going, requires constant monitoring and control:

7. all communications can be made over the internet or phone [at any time] and have the ability to change your vote to manage the performance of the person elected or to direct the public servants entrusted with carrying out the orders. Clearly, numerical restrictions need apply to the management to give warnings etc.

This updated governance seems appropriate and has been derived bottom-up and has the quality of being efficient and this efficiency cannot be recognised among the infinite number of lesser options that can be put forward top-down and especially to benefit certain people. As an example of a [quick and easy] political definition 'democracy is, in Abraham Lincoln's words, the government “of the people, by the people, for the people”. (*The New Authoritarianism*, Salvatore Babones, p ix);

An Example

The example below was published some time ago [11] as a solution to the many problems that we see in fitting together work, family and society and it uses social engineering to solve the problems that are occurring of having fewer children later in life that disrupts careers, forces immigration and creates personality problems [in parents and children] as well as better utilising housing, income and grandparents. One could call this a panacea [to many of the major problems of the family and the Country] but if social engineering works [as I think that it does] using organisation etc., it is well worth considering. Clearly, the proposed structure is similar to the communal-living that was necessary in the Palaeolithic and should be extended to include the exercise and variety of natural healthy foods [versus the junk-foods of today] and country-living [versus inner-city lack of space]. Also, the lack of selection [as part of survival of the fittest] is a very real problem to the present and future of society and it requires a drastic change to today's society but the total benefits could be made large enough to offset any reluctance to change. See [11] for more details.

Firstly, I assume that the herd-model is a valid organisational absolute, but with limited scope in line with the animals using it but it is useful to us [given the restrictions] and the first restriction to relax is the many herds using IVF with the government standing shoulder to shoulder with the dominant male to pay a lifetime wage similar to tenure in the herd. Secondly, domestic violence means that the government steps in to house and feed [especially] women with [these] special children . Extra children are the father's responsibility and not [especially] the government's responsibility but [with the woman's wage] it would be expected to be a shared house and the father would own half [as the Family Court usually decides or at least that the male is desirable to someone]. Thus the more agreeable men would be brought into the proposed herd to increase the gene pool [given that their genes have not been time-tested as are the donors].

Thirdly, it is sensible that women should preferentially have children very young [as in the Palaeolithic] with youngish parents helping to bind the family, remove child-care problems and cost, create a usefulness for the grandparents and share the family home. Fourthly, special children are improved in the same way that the herd is improved and the money supports the parent's household into their old age. Fifthly, the absolute for a *strong nation is 1 culture, 1 religion, 1 goal and make everything ourselves* and this does not mention colour, height or ethnic features but a population can, in time, bring a diverse population together by controlling the selection-choice of the [IVF donor] males. Eventually a species is formed that is the strongest, most durable society and if there is an objection, a breakaway group can form their own species by dividing the area in two. An example of [the lack of] social engineering was the handling of the Civil War where 'Lincolon did not see Blacks as being “an intrinsic part of American society” . . . . In the American imagination, he continues to be regarded as the great hero of the story. The Lincolon Memorial has become the country's most holy anti-racism shrine.' (*The Forever War*, Nick Bryant, p 190) That decision cost the Nation a civil war and ongoing problems [*Forever War*,] to this day and the options [for us] become clear firstly, continue multi-racialism or secondly hive-off another country [for the discontented].

The Value of a Vote

Our universe is a simple and similar fractal and a multitude of contexts are generated by a vote so let us look at the value of a vote. Currently our so-called democracy seems to take pride in 'one person, one vote' which might be fairer than 'no vote' but is close to useless as people make different contributions *to* the Country and some require contributions *from* the Country. This is especially concerning as it allows the selfish and cheaters to vote for their own benefits and why should females vote equally on male matters and vice versa and the rich and poor have equal votes etc.

A vote should be a relativity that needs adequate informational input and should carry a measure of the usefulness of the person to the Country and while this would seem to be difficult to achieve in

Copyright © Darryl Penney

yesteryear, modern society has much more intrusive cross-matching of data.. Hence, as an example, a woman's job is to produce and raise three or more special offspring to maintain the population that gives her one vote for each child plus one for herself, one for a business [in later life], one for higher education and one for half a house [which she could afford from her lifetime wage] plus the government pays a lifetime wage for having and raising the offspring, a business is a possibility in later life and half a house are reasons to be part of the herd [of useful society]. The dominant male gets one vote for himself plus one for the herd-business, one for military training, one for higher education and one for half a house [if a property owner]. Those outside of the herd [not contributing to the herd] get one vote and hopefully will aspire to half a house, military training, higher education, forming a family and business etc. to become useful citizens.

It is worth noting firstly, that the function [and behaviour] of men and women are very different and, according to the creation equation [that is built on orthogonals] are actually orthogonal [independent] and this is the reason that neither can truly understand the other and their votes should exclude men's business and women's business [respectively]. Secondly, a segment of women agitate for equal pay [at least for equal work] but also as equal numbers in management and politics etc. but women have a different role to play which explains their specialised dimorphic shape and smaller brain [that presumably thinks faster]. According to the above, they are being paid proportionately for the number of children and are in a different league to males. In other words, males look outward as protectors and innovators whereas females look inward to family but there is opportunity to move as they wish in a long later-life.

Democracy Now

Over the last 200 years the Western democracies have been led astray by politicians keeping the population in the dark because there were few groups that analysed the intent of the politicians, the reasons behind the political parties and we were content to let the Coalition [Liberal and Nationals] and Labor fight it out about the direction that we should take as a Country. The problem that we did not appreciate was that Labor was no longer about the worker, but had become socialist [as part of a larger worldwide movement], the Liberal party took the easy way of increasing GDP by 5% per year by using immigration [4] and Labor continued the immigration policy to, I suspect, increase the Labor vote as well as bolster [total] demand. Politicians have corrupted the voting system by expanding the voter base inappropriately [as above, [3, 4]] styling themselves to be leaders, having no organisational science, not listening to people and being debateably honest and inflicting their personality problems on us as Albanese's 'houso' image proports.

As an example, after the Secret Harbour debacle of an 11% swing from Labor to the new practically non-existent protest party [One Nation] 'hours after One Nation ripped Secret Harbour from Labor with a massive swing, Albanese told Labor faithful that “hard-right populists” were “dangerous, divisive and downright dishonest” and vowed: “We simply must defeat them.” (Facebook) That these problems are the very ones that the people see to be the problems with the federal Labor party, one has to wonder at the mental gymnastics, the ability of Albanese and the paucity of his grasp of social organisation [this theory].

Adjusting the Paradigm

A physical science has the restriction [imposed by repeatability] that energy and organisation be minima and there are two classes of science firstly, built bottom-up through absolutes as this theory is, that I call 'first-class' and secondly, interpolation of measurements [second-class] and an example is physics, that is still using the 350 year-old simplicity of Newtonian physics. The animals introduced 'free-will' [with the decisions of the mind-brain] but like physics are ignorant of organisation so how do we picture the interplay of the forces within government and the community? The answer is to find someone conversant with the subject and hope that the fractal relationship behind the creation of the universe gives us sufficient traction with simplicity and similarity. The DVD series 'Billions' spends tens of hours of entertainment examining a public servant attorney-general [Chuck] and a market-mover billionaire [Axe], both of which have personality problems from childhood.

Axe wants power and prestige through the financial markets whilst Chuck is successful as a politician and attorney-general with a hatred of billionaires because they have less restrictions, more power and money than he has in a government job . Chuck sets out to destroy Axe and his method is to use the arms of government to help him with favours owed and received as the mechanism instead of money. The favours act firstly, as a crude currency and secondly, as an incentive to others to 'cross the line' into suspect behaviour that requires inducement and so is borderline and beyond their mandate. This is plausible and likely behaviour in public servants with the regular behaviour in parliament where parties and independents are induced to support the passage of a Bill.

The use of favours is a nefarious currency that tends to lure public servants into bending or breaking the law and prosecuting politicians is a regular occurrence and needs to be added to the list of corruptions of our representative democracy. Another problem arises from the herd-similarity [above] is that the Greens and Labor party are not true managing parties of the current society but are parties that have an agenda in mind to change the status quo, which,in an absolute can cause trouble. The socialist Labor party appears to follow the meme 'that if you are unsuccessful in life become a socialist and demand that the successful compensate you'. This meme has no goal for humanity but produces extreme entitlement. Similarly, the Liberal party seeks overseas suppliers to the detriment of local production and likewise has no goal to improve the voter's society by bringing in migrants instead of using organisation for improvement. The Greens are anti-development and do not try to reduce the population of the less-useful or bettering the future population as above [11].

Pursuit of Power

As an example of the selfish and cheaters' ineptitude versus their lust for power, the 'incoming WA One Nation MP Luke Herdegen claims Labor failed to see his Secret Harbour victory coming. “Labor were absolutely asleep at the wheel … they didn’t see it coming,” Mr Herdegen told News24 host Paul Murray. “They threw all kinds of smear tactics and all kinds of rubbish.”' This brings into question how an election should proceed, the amount of money used, the source of that money, the disclosure of conflict of interests and invites a better system such as a true democracy that is now available with electronics. Over the last 200 years we experimented with democracy and used technology as the driver to the goal of a better society, which worked, but the governance failed and we let the cancer of socialism flourish [as public

Copyright © Darryl Penney

servants] that is killing society because socialism is a lust for power by the inept that distorts the organisation of survival of the fittest.

Consider that both Labor and Liberal increased the price of cigarettes gradually to $50 a pack that invited illegal importations selling for $15 a pack and this was done to firstly, raise taxes to compensate the hospital system for the deleterious health effects of smoking. One Nation suggested removing the tax so that cigarettes could compete with the illegal imports but the Albanese government reacted by increasing the policing of shops, closing shops down for a time and forcing people to pay the $50 per pack. Secondly, what is the goal behind this decision? It seems to be a question of having the ability to apply power which is what we would expect from the selfish and cheaters breaking into the organisation of the herd-model. Cigarette smoking is an addiction to nicotine and the answer is the goal of good health and a long useful life [9] and the Herd-model would say 'no tax', that it is your choice individually but for the herd it is a detrimental habit and the herd is better off without your genes.

The lack of understanding of governance, particularly the increasing selfishness of the individual [versus the good of the species or group] is now called 'wokeness' and could be caused by the rise in the power of women in society from better technology that contributes to the decrease in the birthrate. The flood of Muslims [into the West with their tighter control of the number of children] shows that the Christian succour of women has become detrimental to the religion and the West. Clearly the application of a new paradigm in women's place in society is needed such as in [11]. Also, more consideration is needed in choosing the quality of people that offer themselves for public office and not what is offered [and changed] at the party's whim. Physics says that power [concept] is the ability to do work whereas social science needs the context that is the power to do good, the power to tax, the power to ignore etc. also, a 100 plus years ago a politician had to be successful in their own right because there was no wage whereas today it is a well-paid career.

Conflicts of Interest

Many aspects of governance have been covered and the generality of the science [of governance] allows us to investigate all of the context [reduced by the fractal nature of the universe] and as we get closer to suggesting how a true democracy can be implemented, the selfish and the cheaters will fight to keep their nefarious advantages [at our expense] and the 'informed public' [above] must be kept informed. Unfortunately, the chronically ill and elderly require care but must be classified as selfish even as many should have saved for the eventuality and they need what can be spared. An example is, I believe, an exposure of the dealings of the Batemans Bay Soldiers Club in returning only 10% of profits to the public and, I believe, five times the average [State] number of poker machines seemingly in recompense for allowing gambling to infiltrate society.

States-persons Not Politicians

Politicians, as above, are a cancer in governance with their own agenda [that puts them into the selfish and cheaters category] because firstly, they naturally seek to ingratiate themselves with all voters [to be re-elected] irrespective of the needs of the community or Country secondly, they are elected by and changed at the will of the party and thirdly, they have [nearly] complete control for 3 or 4 years and can set their own agenda, laws, taxes etc. and even renege on election promises, ignore street marches, accept social media ridicule etc. all of which we have seen with Albanese's tenure. We need to elect a person that is firstly, committed to their own policies [and not some background party] and secondly, be dependent on the voters where the voters can change their vote to signal their displeasure and if ignored, change the politician or even the government.

So, a States-person does what needs to be done and using the science of governance can explain how and why a course of action is necessary and all of the questions are straight-forward and answerable except for the Socratic questions that don't have an absolute, such as how loyal, how truthful or how obedient one should be. Another example is how generous we should be to the less fortunate and the selfish that have not saved for their old-age that seems to be underpinned by Wagner's law [as a proportion of GDP] for pensions. So, the Herd-model appears to be accurate.

The Games that People Play

As above, I contacted the Independent Liquor and Gaming Authority and was told that, although it was the department that my request should go I was directed to Liquor & Gaming NSW which sent back basically a form-letter without addressing my concerns that the IGLA should consider the ramifications of the new science of organisation in the case study of the Batemans Bay Soldiers Club [3]. This initial failure to penetrate the public service reminds me that although I sent the relevant sections to the CEO [Paul Biddlestone] of the Soldiers Club as a pro forma I have not received acknowledgment, at any time, nor an answer to my formal application for funding from the Club [3]. This problem is similar to the above of public servants closing ranks to discourage interest, change, and suggestions and in the case of the Batemans Bay Soldiers Club, presumably the embarrassment of paying the paltry 10% return [of profit versus the usual 80%] to the community and roughly, in my opinion, having five times the average number of machines [3], has a Board that has little expertise and seems to be primarily a disciplinary unit that provides petty-power to the Chairman to the extent that members have served ['extraordinarily long service of the Directors [36, 27 and 18 years etc.', [3]].

The IGLA is 'an independent statutory authority established under the Gaming and Liquor Administration Act 2007. We promote fair and transparent decision-making under the Gaming and Liquor Administration Act 2007. . . . We will also consider relevant liquor and gaming-related research and evidence, including crime, demographic and health statistics. A number of routine licensing functions are delegated to senior staff in Liquor & Gaming NSW.' (website) The members of the board appear to be lawyers and administrators, and whilst apparently highly qualified and offer 'research and evidence', are they suited to evaluate the application of a new science of organisation and better business structures?

The first step is to bring the matter to their individual attention as it is not a 'routine licensing function' to be delegated but is a necessary addition to their own productive capital. In essence, their professionalism demands that they be up to date individually in the new science of formal organisation that I believe should be brought to their Board-activity. The public servants, IGLA, Batemans Bay Soldiers Club and its Board and CEO appear to have set up cash-cows for themselves, probably not-knowingly but through their limited knowledge of organisation etc. I say this because firstly, it is obvious [above] and secondly, no goal to the distribution of withheld profits, minimum distributions and no plan to monitor or control gambling [given that Australia has possibly the highest

Copyright © Darryl Penney

incidence in the world] etc. I can only firstly, refer interested parties to the use of this theory's software to increased the mental capacity of those involved [6] and secondly, I believe that there have been calls [or many years] for an investigation [the latest being promised and reneged on by Premier Minns] to investigate the industry but as these papers show, a lot of new theoretical research is needed to understand the problem and I hope that this is a useful step in understanding the impact and rectification of addictions through the use of goals [9].

Conclusion and Prediction

The advent of formal organisation has provided the entrance into the study of social science and the present warped nature of governance from witches, the addictive psychology [9], the antics of the Board of the Batemans Bay Soldiers Club [3], the government's [possible] conspiracy of gambling, the communist take-over of all levels of governance etc. to creating a socialist world-order that runs counters to our evolution. The herd-model provides a simple guide to sociology made complete with relativity, the physical and mathematics of concept-context etc. to provide a science of governance for the future but the world's democracies are crumbling under the socialist's take-over of governments with some god-like dream of the sanctity of Human Rights that runs contrary to our evolution of the survival of the fittest. Evolution was tough but public servants are [according to the Herd-model] the selfish and cheaters that are using our tax money to fund their egos and are endangering our nation's sovereignty.

This series of papers has developed the theory, but the socialist takeover prevents a true democracy because of the corruptions that have been loaded into the system by politicians for their own reasons. We need a states-person that is not selfish or aligned with a party that the non-selfish and non-cheaters can vote into power that can change the out-of-date Constitutions [that were produced with top-down thinking centuries ago]. Pauline Hanson is creating a popular party [One Nation] from nothing spurred-on by the [possible] miss-handling of the Australian economy by Albanese and one can only hope that she will become a beacon for the Western so-called democracies and create a true democracy that could spread world-wide using the fractal nature of the Herd-model.
