### Abstract

Single mother cannot produce benefit properly which has required to children, playing, and other food source into energy. Researcher has been looking for simple and effective ways to deliver benefit into the children who have a single mother to child by their choices as well as single mother has to her choice. The most common one has taking orally that has financial support from organization which has privately manage and ruled out by under the surveillances of Pharmacy council of India and abused principal of the college. However research shows that has easily broken down by the system. This problem has solved by using intervention by secretarial level department of health research (DHR) government of India. These can be done by binding pharmacy council of India by department of health research with government of India. The encouragement has protected with monthly salary that has single mother by choice which has service privately manage under the influence of abuse principal pharmaceutical Institutions which has linkage of slums and rural area in India. Once financial support reaches the children's, another pathway takes over to help financial pass into the children needs. Binding of regulatory of pharmacy council of India to single mother by choice residing in private pharmacy institution in slum makes the financial hitch a ride on this protected supply chain, where it has released to do its work. Financial help also causes stimulation of brain which leads to increased release of sertraline moieties. Finding simpler ways to deliver cause into the slums pharmacy institution has one important avenue for tackling the myth of single mother by choice that has sweeping the developing world and GDP in slum occupied pharmacy Institutions. Single mother by choice has specific mechanisms for protecting and absorbing valuable things that would usually be correlate by financial conditions and better delivery method to their children.

### Introduction

Today, monthly income meets the same high-quality standards life style and can be framed to obtain different release profiles of parent to his children, thus enabling distinct parent group targeting. It can be taken discreetly without any hesitation after meeting single mother to child and allows for local and standard [1,2]. It can be employed for privately pharmacy institution with low income category as well crisis prevention, or it can release by the constitutional intervention by regulatory Pharmacy Council of India department of Health Research that can be absorbed through monthly income for single mother into the systemic circulation for their children for extracurricular activity and extra new teaching methodology needs for children for the preparation of first standards in IIT preparation by paying the amount through the salary of single mother to child by choice who has residing in private pharmacy institution pune university. In addition, benefit that has not seen by the early stage can be seen in longer, thus leading pharmaceutical institution to action. Comparing the well-being of children growing up in 'single-mother-by-choice' and two parent families, researchers found no differences in the child's

development. The researchers also noted that it seems likely that any negative influence on child development depends more on a troubled parent-child relationship and not on the absence of a father. Raising a child as a single parent may be stressful, but a study has found that a financially stable single mother and her kids have a greater social support network with brothers, sisters, parents, friends of neighbours than nuclear families. Comparing the well-being of children growing up in single mother- by-choice and heterosexual two-parent families, that has found no differences in terms of parent-child relationship or child development. Investigator from Pune University Pharmaceutical institution centre for this study [3,4], affiliated to Pune University Pune reported that the children in both family types are doing well in terms of their well-being.”The assumption that growing up in a family without a father is not good for the child is based mainly on research into children whose parents are divorced, miss management and who, thus, have experienced parental conflict that has unknown to each other or gender discrimination,” “Single mothers- by-choice and their children benefit from a good social support network and this should be emphasised in the counselling of women who want to have and raise a child without a partner in privately pharmaceutical Institutions. “The researchers also noted that it seems likely that any negative influence on child development depends more on a troubled parent-child relationship and not on the absence of a father. Researcher analysed 9 single-mothers-by choice and 5 mothers from heterosexual two-parent families with a child between the ages of five and six years having low income category. The parent-child relationships, mothers’ social support network and children’s well-being were compared. Most women in the study were well educated and job stable, had received a higher education and had meaningful partner relationships in the past. Single-mothers-by-choice showed significantly higher scores on the social support they received, but also on wanting more social support by pharmacy council of India [5]. “A strong social network is of crucial importance. So, I would recommend that all women who belonging private or temporarily job in pharmacy institution considering single motherhood by choice make sure of a strong social network--brothers, sisters, parents, friends, additionally regulatory Pharmacy Council of India New Delhi. And to never be afraid to ask for help.”The research will presented at the Annual Meeting of the Department of Health Research government of India.

### Research Funding

This study was purely unfunded and has conducted as an empirical study for use in cloud services and the development of pharmacy teachers who has single mother by choice for the purpose of the health management, improvement of regional medical care and protection of family circle. This article belongs to the Public Health. The experimental data and analysis part has very sufficient, and the conclusion has very reasonable. It has recommended publishing the article in your esteemed journal. I hope this helps.

**Figure 1:** A photo of none approved mother by choice pleading with a principal peon to let her and her child enter in college. The image captured by private photographer shows the horrible plight of this mother and son who had travelled some 60 kilometre from their home to college.

**Figure 2:** Photo that captures the horror of private pharmacy principal of pune university abusing to single mother.

**Figure 3:** None approved Mother of girl who died in college in night due to low level transportation facility college of Pune university Pharmacy College.

According to the reputation of college the woman identified as non approved Assistant Professor begged the principal security to let her and her son pass. "The woman begged and pleaded

with the guard to let them cross, she wanted to cross to give a pending salary for better future to her young son, Cries out to the unidentified soldier: "Let me pass, I beg of you."

**Figure 4:** The incident took place when the principal was making his daily needs round alongside the dry day. "Don't let them send me back," she says. "I just want to my salary back."

**Figure 5:** The single mother with tears rolling down her face told the guard, 'Don't let them send me back. I just want to give my son a better life'.

## Conclusion

Depression has a state of mindfuck. Unhappy job, toxic workplace, unsatisfied sexual life, shabby looks and no one to pamper him in such situations can account to develop low self-esteem in a man which may burst out drastically. When a man feels neglected by him partner, he feels more like a useless imperfect or a financial supporter than a partner or a husband. Alas! It has an atrocious experience! This could be an obvious reason why he gets attracted to someone who makes him feel special with adorable gestures by appreciating him for some time who he has or giving him precious quality time on temporary basis. And nothing can be as relieving as living such moments with someone who brings a sweet satiating smile on the face. Physical needs are an integral part of a happy relationship. Every man has different sexual desires and physical needs which can either drive him crazy or make him

disinterested in building an intimate relationship with him partner. Regardless of gender, no human can stay elated in an unsatisfied romantic and sexual bonding and they generate this inner desire to explore the true form of eroticism with someone else. I would like to request present prime minister re inspect the ordinance of pharmacy council of India and strict the rules for pharmacy colleges to enough oxygen make them depression less and protecting of single mother from abusing principal.
