Editorial

Dr. R. Dram, specialist in electron microscopy, and L. Visneski, specialist in microbiology, found that the intention has molecular expression and stimulates the synthesis of receptors. The work was published in 1990 in the *Journal of the American Association for Holistic Medicine* [1]. Peter Nopfler found that in all cells that have receptors and memory, the intention sends vibrations, which stimulate the receptors [2]. R. Jan and B. Dann, in 1996 published in the *Journal of Scientific Exploration* [3] the results of their research demonstrating that high forms of the human conscious influence the material world. R. Jan and B. Dann [3] intuited that just as the particles are particles and waves at the same time, the Conscious seem to also have two natures - of wave and particle. Let me explain precisely what is what.

While our Conscious Mind on the brain surface is our Digital Computer, which operates on biochemical principle (with material biochemical compounds), we have in the Subconscious a Quantum Computer operating with the waves of the Spirit, which I proved to be nonlinear electromagnetic field (NEMF). I also have the proof that this NEMF is weak informational field [4], and if so it could be influenced by intentions. I also found that this NEMF (seen as aura [4]) is emotionally sensitive, which means that watering our intentions with positive emotions and positive expectations would bring positive outcome. So, in my understanding, the "high forms of the human conscious" [3] is the Quantum Computer in the Subconscious [5] operating with the waves of the emotional Spirits, whose weak informational NEMF can influence the material world informationally and emotionally [5].

Dr. R. Jan [3] founded the Research Center for Technical Anomalies at the Princeton University, and after many experiments he concluded that the intention do influences the outcome. How is this done? According to Dr. Jan, the emotions during the intention create a wave of energy, which influences the outcome. Here is the explanation how this is done: if emotions are involved, I think it is done through the Quantum Computer in the Subconscious, which operates with the waves of the emotional Spirit, which is the weak informational NEMF seen as aura. And here is the explanation how positive emotions create the wave of energy. The Russian scientist Shkatov developed and patented equipment, which allows him to measure the spinning of the aura. He found that positive emotions make the aura spin clockwise, while negative emotions make the aura spin counterclockwise [5].

Shkatov does not know that aura's field is nonlinear, but I do because I have developed sensitive equipment capable to measure the weak informational electromagnetic field (EMF), which is 1,000 times weaker than the biocurrents of the body. I found that: 1/ at positive emotions or just positive thinking the energy is higher and better balanced, while 2/ at negative emotions or just negative thinking the energy is low and the energy balance is worse [6]. Nonlinear physics teaches that vortices spin clockwise and suck energy in. Since we measured increased energy at positive emotions [6], this means that our EMF seen as aura is nonlinear, i.e. NEMF, and at positive emotions or just positive thinking it spins clockwise like a vortex and sucks energy in.

Nonlinear physics teaches that anti-vortices spin counterclockwise and release energy. Since we measured decreased energy at negative emotions or just negative thinking, it

means that our NEMF spins counterclockwise like an anti-vortex intention. and loses energy. Thus, while at positive emotions or just positive thinking our NEMF (aura) spins clockwise and sucks NEMF energy in, at negative emotions or just negative thinking our NEMF (aura) spins counterclockwise and releases NEMF energy out. However, for this to happen NEMF energy must be available and this must be the primary substance from which everything material was created - it was called ether, but I call it Space Matrix [5]. Thus, the ether is NEMF, which explains why the existence of ether was denied for so long – it is invisible and it is too weak to be detected. I had to develop super-sensitive equipment to be able to measure it.

Now, let's go back to the intension. If the intention is done with positive emotions or positive thinking, which means we believe in the positive outcome, the NEMF of our aura (Spirit) will spin clockwise and NEMF energy will be sucked in from the Space Matrix, which will increase the energy of our NEMF and contribute to the positive outcome of our intention. If the intention is done with negative emotion or just negative thinking (we don't believe the intended action is going to happen), the NEMF of our aura (Spirit) will spin counterclockwise and lose NEMF energy to the Space Matrix, which will lead to negative outcome of our
